Economic Science Institute
• Lockdown in Italy was on March 9.
• Daily new cases peaked 12 days later.
• It will take about 24 more days to get new cases down below 10 per day.
• That will add about 48,000 cases.

• As of yesterday there were 132,500 cases.
• Add the 48,000 cases that will be diagnosed over the next 24 days to get a total of about 180,000 cases.
• That’s about 3.4 times as many cases as there were when peak cases occurred.
• Lockdown in Spain was on March 15.
• Daily new cases peaked 11 days later.
• It will take about 30 more days to get new cases down below 10 per day.
• That will add about 82,000 cases.

• As of yesterday there were 137,000 cases.
• Add the 82,000 cases that will be diagnosed over the next 30 days to get a total of about 219,000 cases.
• That about 3.8 times as many cases as there were when peak cases occurred.
- Lockdown in the U.S. is undetermined.
- Daily new cases may have peaked last Saturday at 34,196.
- We’ll have about 10 days with cases near but just below peak.
- That will add about 333,000 cases.
- As of yesterday there were 367,000 cases.
- Add the 333,000 new cases to get 700,000 cases on April 17.
- It will take about 30 days from April 17 to reach a few cases per day. That will add about 500,000 to get 1,200,000 cases.
- Lack of compliance will add a few hundred thousand cases. Maybe 1.5 million.
