

# CONTROLLING SPREAD OF DISEASE WITH UVC LIGHT

## WHY UVC LIGHT?

- FAST
- EFFICIENT
- MOST GERMICIDAL

<https://blog.glassesdirect.co.uk/2018/07/18/the-abcs-of-sun-radiation-all-about-uva-uvb-and-uvc-rays/>

## MORE ABOUT UVC LIGHT:

- EFFECTIVE IN MICROBIAL CONTROL
- CAN BE USED IN MULTIPLE SETTINGS (LIKE BIO LABS AND MEDICAL FACILITIES)
- MUST BE HANDLED WITH CARE

## WHAT IT LOOKS LIKE IN...

### HOSPITALS:

UV light sterilizes patient rooms, operating rooms, and any equipment or surfaces in the hospital.

### SCHOOLS:

Schools can supply sources of UVC light for staff to use in classrooms and other common areas in schools.

### FOOD PLACES:

We can use UVC light instead of wipes to clean shopping carts and grocery aisles.

### ENTERTAINMENT:

Incorporating UVC light to the cleaning protocols of public areas will greatly decrease the risk of spread in high-trafficked areas!

### TRAVEL:

Thousands of people travel through airports every day, so using UVC light to disinfect would prevent the spread of germs
